REASONS FOR ALLOWANCE

The applicant's response filed September 9, 2004 and September 27, 2004 to the Office action has been entered. Claims 1-5, 8-9, and 35-44 are pending.

1. The following is an examiner's statement of reasons for allowance:

Concerning claims 1-5, 8-9, and 35-44. no prior art has been found teaching or suggesting the method for monitoring the status of a transplanted organ in a host in which the level of gene, heme oxygenase (HO1) or A20 expression is compared to the baseline level of gene expression of the at least one gene or to the baseline level of gene expression of a constitutively expressed gene and the upregulation of the at least one gene expression indicates that the host is likely to experience transplant rejection, thereby monitoring the status of the transplanted organ.

The closest prior art is the reference of Strom et al. in view of Soars et al. There is no motivation to combine the references because Strom et al. disclose a method of evaluating transplant rejection in a host comprising determining a heightened magnitude of gene expression of immune activation marker gene in a tissue biopsy or peripheral blood mononuclear cell sample (See the Abstract), but Soares et al. report that HO-1 expression is associated with increased graft survival (See pg. 1073, the Abstract). Thus, the claims are patentable over the cited references.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
